## Compact Active HF Antenna Designed for Scanners & Receiving

**£49.94**

### DESCRIPTION

The Compact Active HF Antenna Designed for Scanners & Receiving 500kHz to 30MHz. Ideally suited to permanent installation in marine environments and where other wire aerials would be unacceptable. It comprises a compacted element together with a wideband amplifier in a 420mm (16.5") waterproof cylindrical housing together with an L mounting bracket and 7m length of coax cable with Belling Lee connector. The amplifier gives 21dB gain flat within 1.5dB from 680kHz to 30MHz. There is an adapter to provide DC up the coax to the aerial and the RF out via a 1.2m length of coax terminated with BNC or Phono or PL259 connector. Also a red/black power lead to connect between the adapter and a supply of 12/13.5V with a current of up to 20mA.
